INTRACOM SYSTEMS RELEASES VCOM™ WIRELESS INTERCOM THE MULTI-CHANNEL, WIRELESS SOFTWARE INTERCOM FOR HANDHELDS

February 7, 2008—IntraCom Systems, LLC, a Los Angeles-area developer of highly interoperable, multi-channel software intercom systems for professional applications has released the anticipated **VCOM™ Wireless Intercom**, boasting unprecedented wireless intercom functionality. This next generation wireless intercom brings the power and functionality of IntraCom's VCOM Software Intercom System for PCs to the palm of your hand.

As with the PC system, the wireless, handheld version supports virtually an unlimited number of channels configurable for point-to-points, group calls, and party lines. As many as 200 users are supported and can talk hands free privately or in full duplex conference. The wireless system easily interfaces with other communication systems, does not have frequency constraints, and runs on readily available WiFi and/or data-cellular-enabled handhelds running Windows Mobile 5.0 and higher.

VCOM™ Wireless Intercom offers the power of multi-channel ProComm matrix intercoms in a handheld. Based on a dedicated-server, multiple-client architecture, the software can be used as a stand-alone wireless intercom system or in conjunction with IntraCom's VCOM Software Intercom System for PCs. The VCOM Wireless Intercom Control Panel GUI enables non-blocking, point-and-click control to establish talk and/or listen voice paths. Multiple group and individual voice paths can be established simultaneously and multiple conferences can be accommodated in any complexity. All basic paths are established in advance and are "always on" for instant (multiple) channel access for talking and monitoring.

VCOM Wireless Intercom is highly interoperable with full support for multi-channel/multi-I/O Device Interfacing using readily available I/O gear and WDM or ASIO Drivers. This makes interfacing to other communication systems, such as hardware-based intercom matrix systems and two-way radios, easy and cost effective. **VCOM Wireless Intercom** also supports inexpensive, multi-line analog and T-1 phone interfaces, with on-screen dial-out keypad and on-selector caller-ID to allow seamless interoperability with switched telephone networks.

VCOM Wireless Intercom is available through IntraCom Systems' network of dealers. Visit www.intracomsystem.com for more information or contact Fred Urrutia, VP Channel Partner Relations, IntraCom Systems, LLC, at (518) 827-8502 or furrutia@intracomsystem.com for assistance locating a dealer near you.

About IntraCom Systems

IntraCom Systems, LLC leverages decades of technical expertise and innovation within the mission-critical Voice Communications Systems industry to bring the next generation of software intercom systems to market. The Company is headquartered in the Los Angeles area with development offices in the San Francisco Bay Area.
