For Immediate Release

TURNER STUDIOS USES VCOM IP SOFTWARE INTERCOM FOR NCAA COVERAGE

March 10, 2011—IntraCom Systems, LLC, the Los Angeles-based developer of VCOM, the leading software IP Matrix Intercom System, announced today that its VCOM IP Software Intercom System will be used for NCAA "March Madness" Coverage. VCOM will act as an audio bridge between hardware-based matrix intercom systems at CBS, Turner Studios, and Turner Broadcasting.

A total of sixteen TIE lines will function as Party Lines (PLs). Additionally, VCOM Control Panel GUIs will be loaded on PCs within Turner buildings to enable executives to participate and/or monitor (*i.e.* talk/listen and/or listen) the event. VCOM also is deployed in Turner, to enable on-the-fly link-up to other Turner communications systems in its Atlanta studios.

About VCOM:

VCOM™ is an interoperable, IP software intercom engineered to support highly dynamic, fast, and complex communications requirements. The system consists of IntraCom's:

- server-side Virtual Matrix summing/mixing engine
- client-side control panels for multi-channel/multi-access professional communications
- device interfacing software to easily bridge disparate communication systems including hardware intercoms, two-way radios, and public/private telephone networks
- intuitive System Administration application that enables dynamic configuration and monitoring of the System from any workstation on the network.

VCOM Control Panels provide point-and-click control for establishing talk and/or listen voice paths. Multiple group and individual voice paths can be established simultaneously and multiple conferences can be accommodated in any complexity. Subscribers may talk and/or listen in a single conference or multiple conferences, in any combination and in any sequence.

VCOM runs on standard computer and network hardware and is based on a dedicated server, multiple client architecture. The System readily scales to hundreds of users, is built on a highly flexible platform, and coincides with a broad movement within industry and government to use widely deployed IP infrastructures and commercially available computer hardware.

IntraCom Systems, LLC is a Los Angeles-area developer of highly interoperable, multi-channel software intercom systems for professional applications.
