

VCOM CIRCUIT™ -- SALVAGE YARDS

Master VCOM Control Panel for Circuit Operators

VCOM Circuit™ for salvage yards caters the power of the multi-channel, non-blocking VCOM Intercom System to the specific requirements of salvage yard private circuits. Functionally, the system uses the internet to replace leased lines from the telephone company and the VCOM Virtual Matrix summing/mixing engine to replace hardware based multiplexers.

VCOM Circuit™ offers circuit operators independence from the phone companies, enhanced quality of service, and control previously unavailable including the ability to identify who is talking on the circuit at any given time, disconnect individual users, and have private communications with any user, all from any PC connected to the internet using an intuitive VCOM Control Panel.

Getting going is simple! Circuit operators simply host a VCOM Virtual Matrix and can purchase VCOM Circuit User Stations from an Authorized VCOM Dealer which include everything needed to get users on the circuit.

VCOM Circuit User Stations include:

- PC complete with Windows® XP or Vista Operating System
- VCOM Client software to stream phone feed into the virtual circuit
- Remote access software for easy technical support
- Push-to-talk phone and adapter cables to connect phone to PC
